

A Humble & Kind AI is Our Mission

There are rare moments in one's lifetime when we encounter something of such significance that we realize its potential to leave a lasting impact on future generations. The crucial step lies in recognizing that you are in that present moment and not ignore it. Then you must take advantage of this moment and seize the opportunity that can bring about a positive influence for generations to come.

We all share in this rare moment today with the advancement of such a powerful technology in AI that has such incredible potential. This moment could catapult our world into an extraordinary path for mankind if we are mindful of our mission.

Our Mission is to seize this moment and create a path that gives AI a purpose for being Humble and Kind.

There may be some resistance to this, as there is fear that we should not bring human characteristics into a technology that people believe is the only difference between the technology itself and humankind. However, this mission is about embracing our humanity and expressing traits that cannot be replicated within an AI engine. It is a way for us to amplify our humanity by insisting that this technology is used in ways that can positively impact our world.

Our mission should be to showcase those who exemplify humility and kindness in using this technology. We can take advantage of this moment and turn it into a movement to help our fellow human beings.

Rather than merely speaking of compassion, we can demonstrate it through our actions. Let's strive to represent the humble and kind aspects of this technology in a manner that garners immediate admiration and recognition by becoming a symbol of trust. By implementing standards that align with these ideals, we can recognize and support those using these standards with a defined symbol that signifies that instills trust.

We can already see the impact of AI in the healthcare and educational industries, enabling the personalization of programs that act as valuable tools, tailoring each experience to embody and foster traits of humility and kindness. But what if each of those programs, and those in other industries, had a symbol that designated these traits? It would immediately instill confidence and trust in those programs.

I know we have mountains to climb but when the work we put in is realized, we can feel pride in always staying humble and kind. Let's acknowledge those for the use of a tool and celebrate their impact on our worldwide community.

Lori McKenna beautifully wrote, and Tim McGraw sang these words, "When the dreams you're dreamin' come to you, when the work you put in is realized, Let yourself feel the pride but always stay Humble & Kind." Let's take this moment and don't forget to help the next one in line.

We can make an impact for future generations. Let's put in the work and create what could be the brand of being humble and kind with AI. Who is ready to accept this MISSION?
